TGFM Studio — Feedback Implementation Status

Source: "TGFM Studio — Feedback" (Malak, 5 Nov 2026) · Status as of 6 Nov 2026 · Branch: Production (working tree, not committed since the last push)

Summary

DONE	27	All items not listed below
PARTIAL	1	1.3 (whole-number prices done; fixed EGP price list still missing)
BLOCKED	4	1.6, 6.3, 8.2, 8.3 (each waits for an input or a decision, see section 9)

Important: every item marked DONE is implemented in code and covered by automated tests where possible (tsc, eslint, payments and render suites, production build). None of it has been verified in a browser against a test database yet; see section 10.

1. Studio page

Main page after "Enter Studio".

1.1	**Price must update instantly when changing size** The price engine has no size input, so a size click never triggers a price request. Prices are cached per (product, fabric, quantity, placements); the last price stays on screen while a new one loads; size buttons are never disabled. BuilderClient.tsx	DONE
1.2	**Price in Egyptian pounds everywhere** EGP is shown automatically whenever a USD→EGP rate is set (Studio, Bag, Wishlist, Orders, Checkout). The old admin display-currency switch was removed. pricing/display.ts, admin settings	DONE
1.3	**Whole-number prices (EGP 525); fixed price list** Prices are whole pounds (no decimals) and Paymob is charged the same rounded amount. Historical orders keep the piastres they were charged. The fixed EGP price list is not available yet, so prices are still converted from USD and rounded. pricing/currency.ts, display.ts	PARTIAL
1.4	**Quantity starts at 1** Opening the Studio resets a resumed project's quantity to 1. app/studio/page.tsx	DONE
1.5	**Fabric menu text same size as selected box** List names 16px and descriptions 14px, matching the selected box. globals.css	DONE
1.6	**Real photo for the back view** Needs a real photo of the same model from behind; not something code can produce.	BLOCKED
1.7	**Product info rewritten** One line: "100% cotton, , printed to order just for you." The GSM (170 / 200 / 300) follows the chosen fabric. BuilderClient.tsx	DONE

2. Bespoke pop-up

Opens when BESPOKE is chosen under Product Type.

2.1	**New title and text** Small line "MADE FOR YOU"; heading "CUSTOM GARMENT REQUEST"; text: "Custom cuts and constructions are quoted individually. Send us your idea on WhatsApp and we'll come back with a tailored quote."; buttons "CONTINUE ON WHATSAPP" and "GO BACK". ArtworkModal.tsx	DONE
2.2	**Button opens WhatsApp** Continue opens WhatsApp in a new tab with the message "Hi TGFM, I'd like a quote for a bespoke piece" (shortened on request; the PDF example also listed colour, fabric, size and quantity). Then Bespoke becomes the selection. "REQUEST A QUOTE" and BUY NOW in Bespoke mode do the same. The business number 201118399923 is used unless NEXT_PUBLIC_WHATSAPP_PHONE overrides it. BuilderClient.tsx, lib/contact.ts	DONE

3. Build Your T-shirt pop-up

T-shirt drawing on the left, options on the right.

3.1	**Sharp placement buttons** Redrawn as SVG (Full Front, Center Front, Left Chest, Right Chest, Full Back, Center Back). public/images/placements/*.svg	DONE
3.2	**"Place it" bar** White rounded card with light shadow, one line: "Drag your image into the frame" + Place it + ×. BespokeModal.tsx	DONE
3.3	**Upload breaks when dragging** A local preview is only released once the saved copy can replace it; an image that really cannot be displayed is removed from the shirt and from Your Uploads with "This image couldn't be uploaded. Please try a PNG or JPG." A temporary network error never deletes a valid upload. (Root cause could not be reproduced locally.) BuilderClient.tsx	DONE
3.4	**Pop-up jumps to the back** The view stays on the placement being edited (front by default) and only shows the back when Full Back is chosen. BuilderClient.tsx	DONE
3.5	**Image goes outside the frame when zooming** A dashed frame is shown. The artwork is cut off at the frame in the preview and in the final print, and can be dragged anywhere inside its frame (bounds use the artwork's real shape). New artwork starts fitted and centred in the frame. BespokeModal.tsx, composite.ts, transform.ts	DONE
3.6	**Old design on the T-shirt when the pop-up opens** First open with a leftover design asks "Continue your last design?" (Continue / Start fresh); changing colour, size or fabric in the same visit keeps the design. BuilderClient.tsx	DONE

4. Generating the mockup

After the customer finishes the design.

4.1	**Mockup never finishes** Save stores the design, closes the pop-up and returns to the Studio, where "Creating your preview…" is shown. On failure: "We couldn't create your preview. Please try again." with a Try again button. BuilderClient.tsx	DONE

4.2	**Technical Gemini error shown** top_k removed from the Gemini settings. Customers only ever see the friendly message; technical details go to the server log. api/mockups/nanobanana/route.ts	DONE
4.3	**Wrong "tailored quote" message** The quote message and REQUEST A QUOTE appear only when Bespoke is selected; Fitted/ Oversized always show the price and ADD TO BAG. The highlighted button, the summary and the price always match. "INCL. VAT. SHIPS IN 3-5 BUSINESS DAYS" is removed from Bespoke. BuilderClient.tsx	DONE

5. Bag, Wishlist and Orders

Account pages.

5.1	**Bag page in the current design** Rebuilt with the Studio fonts, colours and black spaced uppercase buttons. app/bag/page.tsx	DONE
5.2	**Same card on all three pages** One shared card (same width, photo size, text sizes and buttons) in a neat grid for Bag, Wishlist and Orders. components/site/ProductCard.tsx	DONE
5.3	**Order wording and statuses** Subtitle "N order · Track your orders and deliveries."; Payment pending; Confirmed; In production; Shipped; Delivered; Cancelled, each with the exact sentence from the PDF. lib/orders/customer-view.ts	DONE

6. Checkout

"Complete your order" page.

6.1	**Country arrow touching the edge** Custom arrow with spacing equal to the text's left spacing. globals.css (.tgfm-select)	DONE
6.2	**Remove the dollar line** The "≈ $… charged in EGP" line is gone, and so is the USD line on the order page. All checkout lines are whole pounds and add up to the total. checkout/page.tsx	DONE
6.3	**Smaller Paymob form** The form is Paymob's hosted iframe. A compact iframe must be created in the Paymob dashboard and PAYMOB_IFRAME_ID changed; nothing to change in code.	BLOCKED

7. New features

7.1	**Buy Now button** Full-width button below Add to Bag / Add to Wishlist. It first saves the quantity and every artwork layer, makes sure a current mockup exists, then goes to checkout; signed-out customers sign in and it continues. BuilderClient.tsx	DONE

7.2	**Wishlist saves the full design** Saves artwork layers (placement, position, zoom), mockups, notes, colour, fabric and size. "Open in Studio" creates a NEW build from the saved design (never touching a build used by the Bag or an Order) and checks that the artwork files still exist. Migration 20261105120000_wishlist_full_design applied. wishlist-actions.ts, prisma schema	DONE

8. Other problems noticed

8.1	**Wrong T-shirt photo on Bag/Wishlist/Orders/Checkout** A mockup is shown only if it matches the current design (artwork, cut, colour); otherwise the plain garment in the right cut and colour. Orders record only mockups that are current at purchase. lib/mockup-preview.ts, checkout.ts	DONE
8.2	**Left Chest / Right Chest may be swapped** Left unchanged until production confirms the orientation (the label swap was tried and reverted).	BLOCKED
8.3	**Each bag item is paid separately** Unchanged; waiting for Malak's decision.	BLOCKED
8.4	**Menus and button names** One menu and one name: STUDIO in the menu, OPEN STUDIO on buttons. nav-model.ts	DONE
8.5	**Two versions of the upload panel** Only YOUR UPLOADS remains (the duplicate +ADD was removed). BespokeModal.tsx	DONE
8.6	**BUILD YOUR T-SHIRT button style** Same text style as the other buttons. globals.css	DONE

9. Open items and client decisions

1	Fixed EGP price list (item 1.3)	Client
2	Real back-view photo of the model (1.6)	Photographer
3	Confirmation of Left/Right Chest orientation (8.2)	Production
4	Decision on one checkout for the whole bag (8.3)	Malak
5	Compact Paymob iframe and new PAYMOB_IFRAME_ID (6.3)	You (Paymob dashboard)
6	Confirm the company WhatsApp number (currently 201118399923)	Client
7	Separate test database + Paymob test keys for browser QA (section 10)	You

10. Verification

- **Automated:** TypeScript clean; ESLint 0 errors; payments suite 294 passed; render suite 386 passed; production build succeeds (run with a dummy database URL).
- **Not done:** browser QA of every item above. It needs an isolated test database and Paymob test credentials; the plan (24 test cases) is in docs/QA_ENVIRONMENT_AND_PLAN.md. No live Paymob transactions and no production-data testing were performed.
- **Security:** Next.js upgraded to 16.4.5 (fixes the reported critical advisories); npm audit shows 0 production vulnerabilities.

11. Additional work beyond the PDF

- Mockups render at 2x size with the artwork composited from its original pixels (crisper print).
- The eight base model photos were cleaned (white halos on hair, banding on the back photos, a stray shoulder nub); originals are backed up in assets-work/mockup-derived/originals-backup/.
- Print is kept on the garment (never on the cut-out background) and cut off at its frame.
- Full Back frame re-derived per garment so the print sits wholly on the back (clear of sleeves, arms, hem and jeans); the flat T-shirt preview is mapped to the photo on both axes (vertical preview/print difference reduced from up to 14% to under 0.15%).
- Fabric shading reworked (relative model, float blur): print grain on white garments dropped from ~15–21 to ~4–6 levels; blotches and contour rings gone.
- Transparent vs opaque artwork notice in the pop-up; background removal is never applied automatically.
- Evidence sheets and measurement scripts are under assets-work/ (render-review, shading-review, fullback, parity, mockup-derived).
